Dear Hiring Manager,   April 9, 2025

I am excited to apply for the role of Software Engineer at your company. Living in Silicon Valley, this role feels like the perfect fit—it allows me to minimize commute time, collaborate closely with talented teams, and leverage my passion for Intelligent system design to build user-centric mobile and web solutions that enhance productivity and streamline enterprise operations.

Here's what defines my approach to Software Engineering:

- **Beyond words—I deliver tangible outcomes:** During my time at Key Solutions Inc., I delivered 2 core service functionalities and made multiple enhancements to the eProtocol software.

- **Problem-solving isn't a hobby—it's a daily discipline:** Tackling over 150+ LeetCode challenges and earning a 50 Days Badge, ranking in the top 6.9% of problem solvers. I continue to build on my Data Structures knowledge everlastingly as a discipline.

- **Crafting advanced system software—leveraging AI modules:** As a certified Machine Learning graduate I'm currently exploring how to build an LLM from scratch, utilizing Transformers and RAG architectures to automate workflows in Linux subsystems.

- **I am not the one to settle—I push boundaries:** Stability is an illusion in a world that thrives on change. I seek challenges, embrace uncertainty, and evolve with every obstacle, knowing that growth lies beyond comfort.

Lastly, I want to let you know that I have been sponsored for an H-1B visa, and I'm authorized to work on long-term projects in the United States for up to six years. I am eager to contribute towards the mission of delivering high-quality technology solutions and transforming complex workflows into creative digital experiences and reality.

Thank you for taking the time to read this letter, and I look forward to hearing from you soon,

Best Regards,
